## **Woburn Continuous Cereals Experiments, Woburn Stackyard, 1876-1926.**

### **Fertilizer treatments to Continuous Winter Wheat and Continuous Spring Barley experiments.**

In both experiments plots with the same number had the same fertilizer treatment.

<b>Plot</b>	<b>Fertilizer and manure treatment</b>
1	Nil. No fertilizer or manure applied
2	N2, N1 since 1907
3	N2*. From 1907 the plot was divided, plot 3a received N2*, plot 3b N1*
4	PKNaMg, PK since 1907.
5	N2PKNaMg, N1PK since 1907
6	N2*PKNaMg, N1*PK since 1907
7	Nil. No fertilizer or manure applied
8	N4PKNaMg. From 1882 the plot was split; sub-plots 8a and 8b had N applied in alternate years only; 8a received N in odd years, starting in 1883, 8b received N in even years, starting in 1882. Since 1907 N2 instead of N4, still in alternate years. PKNaMg applied every year until 1906, PK every year since 1907.
9	N4*PKNaMg. From 1882 the plot was split; sub-plots 9a and 9b had N applied in alternate years only; 9a received N in odd years, starting in 1883, 9b received N in even years, starting in 1882. Since 1907 N2* instead of N4*, still in alternate years. PKNaMg applied every year until 1906, PK every year since 1907.
10a	FYM1 1877-81. Nil 1882-1906 except Rape Cake (R2) in 1889. N1*P 1907-1926.
10b	FYM1 1877-87. Nil 1888. Rape Cake 1889-1926: R2 in 1889, R4 in 1890-1906, R1 in 1907-26.
11a	FYM2 1877-81. Nil 1882-1906. N1*K 1907-26.
11b	FYM2 1877-1906; FYM1.5 1907-1926

### **N fertilizer. Comparison of ammonium-N and nitrate-N:**

Until 1906 ammonia salts (equal weights of ammonium sulphate and ammonium chloride) were applied. Since 1907 ammonium sulphate only.

Nitrate N indicated as \*. Applied as sodium nitrate.

N1	N as ammonium sulphate, 23 kgNha <sup>-1</sup> 1907-26
N2	N as ammonium salts, 46 kgNha <sup>-1</sup> 1877-1926
N4	N as ammonium salts, 92 kgNha <sup>-1</sup> 1877-1906. Applied in spring as two equal amounts
N1*	N as sodium nitrate, 23 kgNha <sup>-1</sup> 1907-26
N2*	N as sodium nitrate, 46 kgNha <sup>-1</sup> 1877-1926
N4*	N as sodium nitrate, 92 kgNha <sup>-1</sup> 1877-1906. Applied in spring as two equal amounts

### **Minerals (P, K, Na, Mg):**

P	P as superphosphate (18% P <sub>2</sub> O <sub>5</sub> ) supplying about 34 kgPha <sup>-1</sup> 1877-1906 (P2). Reduced to about 22 kgPha <sup>-1</sup> 1907-1926, as superphosphate (14% P <sub>2</sub> O <sub>5</sub> ), P1
K1	K as potassium sulphate supplying about 25 kgKha <sup>-1</sup> 1907-1926
K2	K as potassium sulphate supplying 49 kgKha <sup>-1</sup> to plot 11a 1907-1926
K3	K as potassium sulphate supplying 90 kgKha <sup>-1</sup> 1877-1906
Na	Na as sodium sulphate supplying 16 kgNa <sup>-1</sup> 1877-1906. Not applied after 1906, (Na) indicates previously applied.

Mg Mg applied as magnesium sulphate supplying 11 kgMgha<sup>-1</sup> 1877-1906. Not applied after 1906, (Mg) indicates previously applied.

#### Organic manures:

**FYM** (farmyard manure) made from cattle manure. Records were not kept for the actual amounts applied each year. Johnston (1975) calculated the following applications:

FYM1 FYM (average of 10 tha<sup>-1</sup> fresh weight) supplying 61 kgNha<sup>-1</sup> 1877-1887. Top-dressed to winter wheat in February, ploughed in in February before sowing spring barley.

FYM2 FYM (average of 20 tha<sup>-1</sup> fresh weight) supplying 122 kgNha<sup>-1</sup> 1877-1906. Top-dressed to winter wheat in February. For spring barley, ploughed in in February before sowing 1877-88, as a top-dressing in March or April 1889-1906.

FYM1.5 FYM amount adjusted each year to supply 92 kgNha<sup>-1</sup> (average of 14.8 tha<sup>-1</sup> fresh weight), 1907-1926. Ploughed in in October for winter wheat and in March for spring barley.

20 t FYM 1877-1906 also contained approximately 19 kgP and 56 kgK.

14.8 t FYM 1907-1926 also contained approximately 17 kgP and 45 kgK

**Rape Cake**, the residue from oilseed rape after it has been pressed to remove the oil. Amounts were adjusted to supply the following amounts of N:

R1 23 kgNha<sup>-1</sup>, approximately 460 kg rape cake, applied 1907-1926

R2 46 kgNha<sup>-1</sup>, approximately 920 kg rape cake, applied 1889

R4 92 kgNha<sup>-1</sup>, approximately 1840 kg rape cake, applied 1890-1906

1000kg of rape cake also contained approximately 10kg P and 10 kgK

DOI: <https://doi.org/10.23637/ERADOC-1-192>

Where there were minor discrepancies between *Details...* (1970) and Johnston (1975) we have used the values of Johnston.

## Woburn Continuous Wheat Experiment, Woburn Stackyard, 1876-1926

### Applications of lime, 1898-1926. Amounts and harvest years applied.

Lime was applied as a test treatment to some sub plots from 1898 until 1924. Applied as high grade burnt lime (CaO), slaked with water immediately before use. Shown in the summary table as the more usual CaCO<sub>3</sub> equivalent, converted from CaO with a conversion factor of 1.79.

	t ha <sup>-1</sup> CaCO <sub>3</sub> equivalent and harvest year of application					
Plot	1.1	2.2	4.5	9.0	Total 1898-1926	Code
2ai					0	L0
2aii	1905, 1909 1910, 1912				4.5	L1
2bi				1898	9.0	L2
2bii				1898, 1905	18.0	L3
5a					0	L0
5b			1905, 1924		9.0	L2
8ai					0	L0
8aii		1905, 1918			4.5	L1
8bi					0	L0
8bii		1905, 1918			4.5	L1

Applied January each year, except 1898 when applied in December 1897.

No lime applied to the other plots which are not included above.

## Woburn Continuous Wheat Experiment, Woburn Stackyard, 1876-1926

### Plot division dates and areas.

Plots 1, 4, 6, 7 not divided

Plot 2: Divided into 2a and 2b 1898 to test effects of lime.

Plot 2a divided into 2ai and 2aii in 1906 to test effects of lime

Plot 2b divided into 2bi and 2bii in 1905 to test effects of lime

Plot 3 divided into 3a and 3b in 1907 to test different N rates.

Plot 5 divided into 5a and 5b in 1905 to test effects of lime

Plot 8 divided into 8a and 8b in 1882 to test effect of N, applied in alternate years

Plot 8a divided into 8ai and 8aii in 1905 to test the effects of lime

Plot 8b divided into 8bi and 8bii in 1905 to test the effects of lime

Plot 9 divided into 9a and 9b in 1882 to test the effect of N, applied in alternate years

Plot 10 divided into 10a and 10b in 1882 to test different fertilizer treatments

Plot 11 divided into 11a and 11b in 1882 to test with and without FYM

Main plot 0.10 hectare	Sub-plot (a, b) 0.05 hectare	Sub sub-plot (i, ii) 0.025 hectare	Old plot notation
<b>1</b> 1876-1926			1
